A FRONT-END
WEB DEV'S
CAREER GUIDE

The front-end developer creates client-side software which handles the interaction and user experience of visitors to a website or a web app.

HTML, CSS, & JS

HTML, CSS, and Javascript are the basics of the web. Learn them REALLY well before moving on! jQuery is thing of the past but spend a day on it.

> HTML
> CSS
> Javascript
> jQuery

JAVASCRIPT

Learn Javascript well. It's the foundation for everything you'll be doing in the future.

> ES6

RESPONSIVE WEB DESIGN

Make your page look good on all devices (desktops, tablets, and phones).

> media queries
> responsive typography
> responsive images

PREPROCESSORS

Sass, Sass, and more Sass. Forget the rest.

> Sass

CSS FRAMEWORK

Semantic UI is the new kid on the block but go with Bootstrap. I use Bulma

> Bootstrap
> Semantic UI

MODULE LOADER

Learn Webpack. You can learn gulp too but it's optional.

> Webpack

MODULAR JS | DESIGN PATTERNS

Time to write BIG-BOY javascript. Very IMPORTANT. People skip this.

JS FRAMEWORK

Vue is easier but go with React :) Should be relatively easy if you understand JS properly.

> React
> Vue.js

MVC REACT/REDUX

Since you'll be doing React, you'll need to learn these as well.

> Flux
> Redux

TESTING

Gotta take care of those JS bugs.

> Mocha

PROJECTS

By this point, you should have some solid projects.

YOU DID IT!

Now, go get a kick-ass job or become an independent web dev consultant/freelancer.
